

# Discussion Problem

According to Hammond's Postulate, which of the following is correct?

- The transition state of an endothermic reaction step will be more reactant-like than product-like.
- The intermediate of an endothermic reaction step will be more reactant-like than product-like.
- The transition state of an exothermic reaction step will be more reactant-like than product-like.
- All transition states are more product-like than reactant-like.
- None of the above.
